

EIGHT POINT.ONE SOLAR CHARGING STATION

- ● **Visible sustainability**

The integrated architectural approach combines the latest technology with a unique design suited to the materials - and makes genuinely emission-free e-mobility possible.

- ● **Future-orientated modularity**

The Point.One solar charging station enhances parking spaces, makes parking easier and at the same time produces CO₂-free electricity. The charging station columns can be retrofitted according to the requirements and numbers of electric cars.

- ● **Versatile mobility solutions**

e-mobility means more than just electric cars. Through various different system configurations, Point.One enables the comfortable and ecological charging of all battery-operated mobility solutions.

- ● **Flexible individuality**

Individual support and the latest planning and manufacturing processes enable flexible design which can be adapted to any site - while still maintaining the unique architectural features. Targeted advertising media and infotainment can also be incorporated to provide additional benefits.
